

BSS 2000

DUAL DUROMETER,
FULL DEPTH COLOR
TRACK SYSTEM

Give your team the ultimate edge with the state-of-the-art BSS 2000 track system, designed and manufactured for optimal competitive performance indoors and out.

Grounded by a bio-engineered force reduction layer of butyl rubber and **full-depth color polyurethane**, the BSS 2000 provides the resilient response and maximum energy return your athletes need to shatter records.

Each system is **finished with a customized surface** engineered to meet the intense demands of competition. EPDM granules – embedded, encapsulated or Hobart textured – are mixed throughout the depth of the wear layer giving your athletes the necessary traction for improved response times and total control.

Certified by the IAAF and backed by an unparalleled **10-year warranty**, the BSS 2000 is the premier surface for high level training and competition.

Your choice of embedded, encapsulated or Hobart textured EPDM granules are mixed throughout the full-depth of the wear layer, giving your athletes superior traction and control.

IAAF-certified and produced to meet the intense demands of Olympic-caliber competition.

The force reduction layer is constructed with butyl rubber and environmentally friendly polyurethane for maximum energy return.

THE SCIENCE BEHIND TRACK AND FIELD
